

**STATE OF NEW HAMPSHIRE
PUBLIC UTILITIES COMMISSION**

DE 16-241

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE d/b/a EVERSOURCE ENERGY

**Petition for Approval of Gas Capacity Contract with Algonquin Gas Transmission, LLC,
Gas Capacity Program Details, and Distribution Rate Tariff for Cost Recovery**

Order Dismissing Petition

ORDER NO. 25,950

October 6, 2016

In this Order, the Commission dismisses Eversource's petition requesting approval of a contract to purchase capacity on the proposed Access Northeast gas pipeline, and associated program details and distribution rate tariff. The Commission has determined that Eversource's proposed program is inconsistent with New Hampshire law. The legal authorities relied upon by Eversource and other supporters of the petition do not overcome the policies preventing such activity found within the Electric Utility Restructuring statute, RSA Chapter 374-F.

I. EVERSOURCE'S PROPOSAL

On February 18, 2016, Public Service Company of New Hampshire d/b/a Eversource (Eversource) filed a petition for approval of a proposed 20-year contract with Algonquin Gas Transmission, LLC (Algonquin), for natural gas capacity on Algonquin's Access Northeast Pipeline Project (Access Northeast pipeline), and for recovery of associated costs through a new distribution rate tariff, to be assessed on all of Eversource's customers. In its petition, Eversource sought approval of: (1) a 20-year interstate pipeline transportation and storage contract providing natural gas capacity for use by electric generation facilities in the New England region (the Capacity Contract); (2) an Electric Reliability Service Program to set

parameters for the release of capacity and the sale of LNG supply made available to electric generators through the Capacity Contract; and (3) a Long-Term Gas Transportation and Storage Contract tariff for Eversource's rates (Tariffed Rate) to be applied through a uniform cents-per-kWh rate element on all retail electric customers served by Eversource, to provide for recovery of costs associated with the Capacity Contract.

Eversource is a public utility headquartered in Manchester, operating under the laws of the State of New Hampshire as an electric distribution company (EDC). Algonquin is an owner-operator of an interstate gas pipeline located in New England. Algonquin is owned by a parent company, Spectra Energy Corp (Spectra), a publicly-traded corporation headquartered in Houston, Texas. Algonquin has partnered with Eversource's corporate parent, Eversource Energy, headquartered in Boston, Massachusetts, and Hartford, Connecticut, and with National Grid, the parent company of EDC subsidiaries in Rhode Island and Massachusetts, to develop the Access Northeast pipeline. In general terms, Eversource Energy's EDC subsidiaries in Connecticut, Massachusetts, and New Hampshire and National Grid's EDC subsidiaries in Rhode Island and Massachusetts, are each individually seeking regulatory approval of gas capacity on the Access Northeast pipeline.¹

The Access Northeast pipeline is intended to provide 500,000 million British thermal units (MMBtu)/day of incremental gas transportation capacity and 400,000 MMBtu/day of incremental liquefied natural gas (LNG) storage deliverability. Under its petition, Eversource would hold contractual entitlements for firm gas transportation and storage deliverability up to a

¹ The Massachusetts Supreme Judicial Court issued an order prohibiting the Massachusetts Department of Public Utilities from approving the companion petition from the Massachusetts affiliates of Eversource Energy and National Grid. The Massachusetts Court concluded such a Capacity Contract would contradict the policy embodied in the Massachusetts restructuring act, which removed electric companies from the business of electric generation. 475 Mass. 191 (2016).

Maximum Daily Transportation Quantity of 66,000 MMBtu/day, which would represent 7.4 percent of the total capacity of the Access Northeast pipeline. Eversource asserts that energy cost savings resulting from the increased supply of gas capacity to New England electric generators would exceed contract-related costs by a 3:1 ratio, excluding any additional capacity-release revenues that would be credited to Eversource's customers, thereby offering Eversource's customers significant benefits and justifying the recovery of the contract costs through rates.

II. PROCEDURAL HISTORY

With its petition in February, Eversource filed supporting testimony and related exhibits along with a motion for confidential treatment of certain information. Algonquin filed a similar motion for confidential treatment on March 10, 2016. The petition and subsequent docket filings, other than any information for which confidential treatment is requested of or granted by the Commission, are posted to the Commission's website at <http://www.puc.nh.gov/Regulatory/Docketbk/2016/16-241.html>.

There was significant interest in this docket from its inception. On February 22, 2016, the Office of Consumer Advocate (OCA) filed notice of its participation on behalf of residential ratepayers pursuant to RSA 363:28. Numerous other entities and groups sought intervenor status. They included Algonquin, NextEra Energy Resources LLC (NextEra), Richard Husband, TransCanada Pipelines (TransCanada), Portland Natural Gas Transmission System (PNGTS), Exelon Generation Company, LLC (Exelon), Coalition to Lower Energy Costs (CLEC), Tennessee Gas Pipeline Company (Tennessee), the New Hampshire Municipal Pipeline Coalition (NHMPC), SunRun Inc., Pipe Line Awareness Network of the Northeast (PLAN), Repsol Energy North America Corporation (Repsol), the Office of Energy and Planning, the Conservation Law Foundation (CLF), and ENGIE Gas &LNG, LLC (ENGIE). On April 22,

2016, the Commission issued Order No. 25,886, addressing intervention requests and certain procedural issues.

In its March 24, 2016, Order of Notice, the Commission indicated that before assessing the merits of Eversource's proposal, it would determine as a threshold matter whether the proposed Capacity Contract and the associated request for rate recovery, are consistent with New Hampshire law. The Commission set deadlines for initial submissions and responses on the legal issues of April 28 and May 12, respectively.

On May 10, 2016, the OCA filed a motion pursuant to RSA 363:32, for designation as Staff Advocates, Electric Division Assistant Director, George McCluskey and Staff Attorney, Alexander Speidel. The OCA alleged that, due to past involvement in the IR 15-124 investigation regarding gas supply constraints into the New England region, past pleadings at FERC, involvement in regional wholesale market meetings regarding related topics, and alleged statements made by Staff at a technical session in the instant docket, Messrs. McCluskey and Speidel should be designated Staff Advocates. This motion received the concurrence of CLF, Richard Husband, NextEra, and NHMPC.

III. POSITIONS OF THE PARTIES

A. Supporters of the Capacity Contract

Eversource, Algonquin, and CLEC² (collectively the Supporters) argue generally that Eversource's plans are authorized by a number of statutes, either standing alone or in combination. The Supporters' basic argument is that RSA Chapter 374-F, the electric utility restructuring statute, was intended to lower energy prices and that an EDC's purchase of gas capacity to be used by generators could further that intent. The Supporters argue as well that

² Although CLEC supported the legality of an EDC entering into a long-term gas capacity contract, it objected to the lack of a competitive procurement process for the Capacity Contract entered into by Eversource. CLEC Brief at 26-29.

Eversource's proposal could be considered to be part of its obligation to provide reliable service at reasonable rates under RSA 374:1 and :2; or the type of "least cost" resource planning required by RSA 378:37 and :38. They also point to the specific language in RSA 374:57, which sets forth an EDC's obligations when it "enters into an agreement with a term of more than one year for the purchase of generating capacity, transmission capacity or energy"; and to RSA Chapter 374-A, which discusses EDCs' participation in electric power facilities. The Supporters dispute the opposition arguments that Eversource's plan would violate the Federal Power Act and the Natural Gas Act. They maintain that the proposal is consistent with Federal law and thus not preempted.

B. Opponents of the Capacity Contract

ENGIE, NextEra, CLF, OCA, Exelon, NHMPC, and PLAN, (collectively the Opponents), all disagree. They argue that the most significant intention of the restructuring statute, RSA Ch. 374-F, was to do what its title promised and restructure the industry to get the EDCs out of the generation business completely. To the Opponents, lower rates were and continue to be expected as a result of that restructuring, as competition for generation services replaces the vertically integrated generation, transmission, and distribution structure that existed for decades before. The Opponents view competitive markets and retail choice for consumers as the key components of restructuring; rate effects are secondary to competition. They also claim that in the restructured market, the risks associated with investments in generation would be borne by the owners of that generation, not by the ratepayers of the regulated distribution utilities. As for the other statutes that are part of the Supporters' arguments, the Opponents' general position is that the restructuring statute controls. They argue that those other statutes do

not support Eversource's proposal, either because they never meant what the Supporters argue, or because they have been superseded by the more recent enactment of RSA Chapter 374-F.

The Opponents make two additional points to support their position. First, they argue that the notion of an EDC charging customers for the costs of a gas capacity contract is fundamentally inconsistent with the requirement that assets included in rate base must be "used and useful." They also assert that the proposed Capacity Contract and the release of gas capacity to wholesale power generators is pre-empted by the Federal Power Act and the Natural Gas Act.³ They cite to decisions by the Federal Energy Regulatory Commission ("FERC"), and recent decisions by the United States Supreme Court to argue that state laws permitting proposals like Eversource's improperly interfere with FERC's regulation of both the wholesale natural gas market and the wholesale electric market.

IV. COMMISSION ANALYSIS

A. New Hampshire Electric Utility Restructuring Statute, RSA Chapter 374-F

The threshold question regarding any potential proposal for gas capacity acquisition by a New Hampshire EDC is whether the Electric Utility Restructuring Statute, RSA Ch. 374-F, (Restructuring Statute) prohibits such activity. All parties to this proceeding make arguments based on the Restructuring Statute passed in 1996 and implemented over the course of many years, including most recently through Order 25,920 (July 1, 2016) approving the divestiture of Eversource's remaining hydro and fossil electric generation facilities. We must determine: (1) whether the functional separation of transmission/distribution activities on the one hand, and generation activities on the other, called for by RSA 374-F:3, III, would be violated by the terms of Eversource's proposal, and (2) if yes, whether this directive of the Restructuring Statute

³ See Natural Gas Act 15 U.S.C. § 717c(b) (prohibiting preferential pricing for natural gas capacity releases) and Federal Power Act 16 U.S.C. § 824(b)(1) (giving FERC core responsibility for regulating electric transmission and wholesale pricing).

overrides, or supersedes, all other restructuring principles and therefore prohibits the Capacity Contract and associated Tariffed Rate contemplated by Eversource.

In examining these questions, we apply traditional New Hampshire principles of statutory interpretation. The New Hampshire Supreme Court first looks to the language of the statute itself, and, if possible, construes that language according to its plain and ordinary meaning. The Court interprets statutes in the context of the overall regulatory scheme and not in isolation. The goal is to determine the Legislature's intent. Further, the Court construes statutes, where reasonably possible, so that they lead to reasonable results and do not contradict each other. When interpreting a statute, the Court gives effect to all words in the statute and presumes that the legislature did not enact superfluous or redundant words. *See Appeal of Old Dutch Mustard Co., Inc.*, 166 N.H. 501 (2014); *State v. Collyns*, 166 N.H. 514 (2014). When a conflict exists between two statutes, the later statute will control, especially when the later statute deals with the subject in a specific way and the earlier enactment treats that subject in a general fashion. *Board of Selectmen v. Planning Bd.*, 118 N.H. 150, 152 (1978); *see also Appeal of Pennichuck Water Works*, 160 N.H. 18, 34 (2010) (quoting *Appeal of Plantier*, 126 N.H. 500 (1985)).

Because the Restructuring Statute contains numerous policy directives, we begin our analysis of the statute with reference to its stated purposes.

I. The most compelling reason to restructure the New Hampshire electric utility industry is to reduce costs for all consumers of electricity by harnessing the power of competitive markets. The overall public policy goal of restructuring is to develop a more efficient industry structure and regulatory framework that results in a more productive economy by reducing costs to consumers while maintaining safe and reliable electric service with minimum adverse impacts on the environment. Increased customer choice and the development of competitive markets for wholesale and retail electricity services are key elements in a restructured industry that will require unbundling of prices and services and at least functional separation of centralized generation services from transmission and distribution services.

II. A transition to competitive markets for electricity is consistent with the directives of Part II, article 83 of the New Hampshire constitution which reads in part: “Free and fair competition in the trades and industries is an inherent and essential right of the people and should be protected against all monopolies and conspiracies which tend to hinder or destroy it.” Competitive markets should provide electricity suppliers with incentives to operate efficiently and cleanly, open markets for new and improved technologies, provide electricity buyers and sellers with appropriate price signals, and improve public confidence in the electric utility industry.

RSA 374-F:1, I and II.

In addition to the overall statutory purposes, RSA 374-F:3 outlines the restructuring policy principles that must govern the Commission’s approach to restructuring the New Hampshire electric market. RSA 374-F:3, III states, in part:

When customer choice is introduced, services and rates should be unbundled to provide customers clear price information on the cost components of generation, transmission, distribution, and any other ancillary charges. Generation services should be subject to market competition and minimal economic regulation and at least functionally separated from transmission and distribution services which should remain regulated for the foreseeable future. However, distribution service companies should not be absolutely precluded from owning small scale distributed generation resources as part of a strategy for minimizing transmission and distribution costs.

The disagreement in this matter is based on the multiple objectives in the sections quoted above. Supporters point to the purpose of reducing costs to customers, and argue that having EDCs purchase gas capacity for use by electric generators will further that goal. Opponents argue that competition, furthered by restructuring and unbundling, is the ultimate purpose of the statutory scheme.

In weighing the restructuring policy principles of RSA 374-F, we agree with the Opponents and find that the overriding purpose of the Restructuring Statute is to introduce competition to the generation of electricity. The competitive generation market is expected to produce a more efficient industry structure and regulatory framework, by shifting the risks of

generation investments away from customers of regulated EDCs toward private investors in the competitive market. The long-term results should be lower prices and a more productive economy. To achieve that purpose, RSA 374-F:3, III directs the restructuring of the industry, separating generation activities from transmission and distribution activities, and unbundling the rates associated with each of the separate services. A more efficient structure involves placing investment risk on merchant generators who can manage that risk, and allowing customers to choose suppliers, thus enabling customers to pay market prices and avoid long-term over market costs. This purpose is underscored by the Legislature's recent strong encouragement, through the passage of HB 1602 and SB 221, to approve the 2015 Settlement Agreement that will accomplish the functional separation of Eversource's generation activities from its distribution activities. *See* 2014 N.H. Laws Ch. 310 (H.B. 1602); 2015 N.H. Laws Ch. 221 (S.B. 221); and Order No. 25,920 (July 1, 2016).

Based on that finding, we conclude that the proposal brought forward by Eversource is fundamentally inconsistent with the purposes of restructuring. Specifically, we conclude that the Capacity Contract is a component of "generation services" under RSA 374-F:3, III, which requires unbundled, clear price information for the cost components of generation, transmission, and distribution. The acquisition of the gas capacity is clearly related to an effort to serve New England gas-fired electric generators with less expensive, more reliable fuel supplies. Including such a generation-related cost in distribution rates would combine an element of generation costs with distribution rates and conflict with the functional separation principal.

Having concluded that the basic premise of Eversource's proposal – having an EDC purchase long-term gas capacity to be used by electric generators – runs afoul of the Restructuring Statute's functional separation requirement, we turn to the question of whether any

of the other purported justifications would allow us to go forward in this proceeding to consider the merits of the proposal. To analyze the effect of other statutes applicable to EDCs on the Restructuring Statute, we must consider two issues. First, we must identify whether any of those statutes standing alone would support the Eversource proposal, and, if so, how those statutes are affected by the subsequent enactment of the Restructuring Statute.

B. Commission's General Oversight and Other Utility Statutes

Supporters note that RSA 374:1 and RSA 374:2 require that EDCs provide safe and reliable service at just and reasonable rates. They claim that by entering into the Capacity Contract and then selling capacity to gas-fired electric generators, Eversource would both increase reliability of electric supply and mitigate price spikes in the wholesale and retail markets in New England. That would, in turn, help Eversource meet its obligations under RSA 374:1 (safe and reliable service) and RSA 374:2 (just and reasonable rates). While we agree that those two sections of our supervisory statutes govern our regulation of Eversource's provision of distribution services, we do not agree that an EDC is responsible for either the reliability of the generation supply, or the price of such supply. That function has been shifted to the competitive marketplace for retail electric generation service in New Hampshire. For regional wholesale electric markets, the responsibility for regulating reliability and pricing remains with ISO-NE and FERC. *See* Federal Power Act, 16 U.S.C. § 824 (federal jurisdiction over electric transmission and wholesale electric sales).

Supporters also claim that the least cost planning statutes, RSA 378:37 and 378:38, create an affirmative obligation for Eversource to plan for adequate energy supply resources. The Legislature has set the goals for planning as follows:

The general court declares that it shall be the energy policy of this state to meet the energy needs of the citizens and businesses of the state at the lowest reasonable cost while providing for the reliability and diversity of energy sources; to maximize the use of cost effective energy efficiency and other demand side resources; and to protect the safety and health of the citizens, the physical environment of the state, and the future supplies of resources, with consideration of the financial stability of the state's utilities.

RSA 378:37. In fulfilling its planning obligations a regulated utility is required to do a number of assessments, including:

III. An assessment of supply options including owned capacity, market procurements, renewable energy, and distributed energy resources....

VI. An assessment of the plan's long- and short-term environmental, economic, and energy price and supply impact on the state.

VII. An assessment of plan integration and consistency with the state energy strategy under RSA 4-E:1.

RSA 378:38, III-VII. The Supporters reason that if the required assessments of generating capacity, price, and supply show that more gas is needed, and if the gas-fired generators are unwilling to purchase the necessary capacity, then it is the responsibility of the EDCs to do what has to be done and commit to those purchases.

Reading the planning statutes together with RSA Ch. 374-F, however, we do not find that the statutes permit the re-joining of distribution and generation functions in the manner provided by the Capacity Contract. The planning statutes must be read in concert with RSA Ch. 374-F and in light of the industries to which they apply. RSA 378:38 applies to both electric and natural gas utilities, and those industries now differ in a fundamental way. While natural gas utilities continue to arrange natural gas supplies for their residential and small commercial customers, following electric restructuring, electric utilities do not arrange electric supply for their customers. Instead, pursuant to RSA 374-F:3, V(c), electric utilities provide electric supply through default service, which is offered only to those customers who have not opted to purchase

their electricity from a competitive supplier. Default service is designed to be a safety net for customers who do not choose an independent competitive supplier. Further, default service must be competitively procured. *Id.* As a result of the Restructuring Statute, electric distribution utilities are no longer required to conduct long-term planning for electric supply. Accordingly, we find that in a restructured electric industry, the planning requirements for an EDC are limited to procurements of electric supply for the EDC's default service customers. That obligation is not broad enough to justify approval of a proposal like Eversource's.

Supporters also point out that the 10-Year New Hampshire State Energy Strategy, referenced in RSA 378:38, VII, encourages exploration of ways to increase gas pipeline capacity in New England. They claim that the Strategy thus requires EDCs to explore ways to increase gas pipeline capacity. We disagree. As discussed above, RSA 378:38 applies to both electric and gas utilities. Both are required to plan to have an adequate supply to meet their customers' demand. In our view, gas supply under the State Energy Strategy is the responsibility of the gas utilities. While Eversource, an EDC, cannot enter into the Capacity Contract and have it paid for through its distribution rates, natural gas utilities might be appropriate proponents of increased gas pipeline supply under RSA 378:38, VII. *See Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities*, Order No. 25,822 (October 2, 2015) (approving firm transportation agreement for natural gas supply).

Supporters cite RSA 374:57, "Purchase of Capacity," as support for Eversource's proposal.

Each electric utility which enters into an agreement with a term of more than one year for the purchase of generating capacity, transmission capacity or energy shall furnish a copy of the agreement to the [C]ommission no later than the time at which the agreement is filed with the Federal Energy Regulatory Commission pursuant to the Federal Power Act or, if no such filing is required, at the time such agreement is executed. The [C]ommission may disallow, in whole or part, any

amounts paid by such utility under any such agreement if it finds that the utility's decision to enter into the transaction was unreasonable and not in the public interest.

RSA 374:57. The Opponents, however, maintain that the statute does not mean what the Supporters think it means. The Opponents argue that RSA 374:57 was enacted following PSNH's bankruptcy to tighten the commission's authority over contracting decisions for electric supply; a service EDCs no longer provide. According to the Opponents, a statute intended to give the commission authority to disallow unreasonable provisions in contracts with terms longer than one year cannot mean an electric utility can enter into a long-term contract for gas transmission.

While the Supporters' reading of the statute is plausible, we believe the Opponents have the better argument. The meaning of "capacity" in that legislation is limited to electric generating capacity and electric transmission capacity. First, the types of agreements listed are commonly associated with electric supply. Second, if gas capacity was to be included, the statute would have included references to the Natural Gas Act in addition to the Federal Power Act. Thus we find that RSA 374:57 concerns long-term contracts for electric supply and does not authorize EDCs to purchase gas capacity under long-term contracts.

Supporters claim that RSA Chapter 374-A's provisions granting EDCs authority to "enter into and perform contracts" related to "participation in electric power facilities" provide support for Eversource's petition. Supporters observe that those provisions were not repealed by subsequent enactments such as RSA 374-F. NextEra argues RSA 374-A applied to vertically integrated "electric utilities" as defined in 1975 by 374-A:1, IV and therefore that the provisions in RSA 374-A:2, I and II are inapplicable in a restructured market where electric utility has been redefined. RSA 374-A:1, IV defines electric utilities as "primarily engaged in the generation and

sale or the purchase and sale of electricity or the transmission thereof.” We believe NextEra is correct and that RSA 374-A no longer applies to an EDC like Eversource.

The change in the industry through the Restructuring Statute, first passed in 1996, effectively ended a restructured EDC’s ability to participate in the generation side of the electric industry. Given the centrality of the separation of functions between distribution and generation in the Restructuring Statute, allowing an EDC to “participate in electric power facilities” under RSA 374-A in the manner proposed by Eversource would make little sense in light of RSA 374-F.

Opponents also argue, based upon RSA 378:28, that the Capacity Contract violates the used and useful requirement which is a basic component of utility ratemaking under New Hampshire law. Supporters counter that RSA 378:28 applies to rate base and because the Capacity Contract does not add to Eversource’s rate base, and is instead an ongoing expense, the used and useful standard does not apply. The requirement that utility rate base be used and useful for a utility to include a return on that rate base in rates has a corollary principle governing expenses. That is, expenses must be prudent and necessary for providing the service offered by the utility. In this case, we have found that after enactment of the Restructuring Statute, EDCs should unbundle rates for distribution from rates for energy supply. Capacity Contract expenses are not needed to supply distribution services to Eversource distribution customers. The Capacity Contract is designed to support electric generation supply, and therefore expenses related to generation supply would be disallowed in distribution rates.

C. Federal law

As noted above, the Opponents also argued that the Capacity Contract would violate a number of federal laws, including the Natural Gas Act, the Federal Power Act, and the terms of

FERC procedures and precedent. Having determined that we cannot approve the Capacity Contract and related capacity releases under New Hampshire law, we need not reach a decision concerning federal pre-emption.

V. CONCLUSION

The proposal before us would have Eversource purchase long-term gas pipeline capacity to be used by gas-fired electric generators, and include the net costs of its purchases and sales in its electric distribution rates. That proposal, however, goes against the overriding principle of restructuring, which is to harness the power of competitive markets to reduce costs to consumers by separating unregulated generation from fully regulated distribution. It would allow Eversource to reenter the generation market for an extended period, placing the risk of that decision on its customers. We cannot approve such an arrangement under existing laws. Accordingly, we dismiss Eversource's petition.

We acknowledge that the increased dependence on natural gas-fueled generation plants within the region and the constraints on gas capacity during peak periods of demand have resulted in electric price volatility. Eversource's proposal is an interesting one, with the potential to reduce that volatility; but it is an approach that, in practice, would violate New Hampshire law following the restructuring of the electric industry. If the General Court believes EDCs should be allowed to make long-term commitments to purchase gas capacity and include the costs in distribution rates, the statutes can be amended to permit such activities.

Because that concludes this proceeding, we deny the motion to designate Staff Advocates as moot. We will address the joint motion for confidential treatment in a separate order.

Based upon the foregoing, it is hereby

ORDERED, that Eversource's instant petition is hereby DISMISSED; and it is

FURTHER ORDERED, that the information subject to Eversource's joint motion for confidential treatment should be kept confidentially, pending an order by the Commission regarding the disposition of same under RSA Chapter 91-A; and it is

FURTHER ORDERED, that the motions to designate Staff Advocates are hereby DISMISSED, having been rendered moot by the decision delineated in this Order.

By order of the Public Utilities Commission of New Hampshire this sixth day of October, 2016.
